

— be_sphere — midrange_pl0 — simple_cluster ⋯ transition threshold 0.05
— large_diffuse_lowsf — pl2_steep — small_dense_highsf

1. cooling trigger (it dips early, then surges back up)

2. the dip is L_{loss} rising, the surge is L_{loss} collapsing ($L_{\text{gain}} \sim \text{flat}$)

mechanical feedback: SN onset (~ 3 Myr) is late — the early dip is pre-SN
